

Please replace the paragraph beginning on page 23, line ⁹~~7~~, with the following amended paragraph:

CH
11/19/07

In a related aspect according to the present invention, query notification header is provided as part of the enhanced TDS protocol. At the time of establishing the query, the server is asked to provide ~~[[that]]~~ the client with future updates related to the query. As such the requirement for periodically re-asking the server of any changes to the initial query is mitigated. Accordingly, the manner of sending such notifications (*e.g.* channels for sending the notification)~~[[;]]~~, as well as the set up for notification is established at the time of the query, and does not require changes to be made on the client side. Moreover, such feature allows creation of middle tier type caches that are transparent to the client.
